

Amendments to the Claims:

Please cancel claims 1-123 without prejudice and add new claims 124-165. The following listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-123 (Cancelled).

Sub BT
Claim 124 (New). A book copying system for copying a book based on electronic image data obtained through a network, comprising:

5 a data service system connected to the network and to supply electronic image data of a book through the network, the data service system having a data storage section in which image data of a plurality of different books are stored and a data managing section to manage the image data; and

10 a print service station connected to the network and installed at a place where the print service station provides print service for a customer, the print service station having a print managing section to input a print order of a customer to print a copy of an ordered book and to communicate the data service system so as to obtain image data of the ordered book
15 from the data storage section through the network and a print

section to print a copy of the ordered book based on the obtained image data;

wherein the data service system sets a data service charge for the image data of the ordered book, the print service station
5 sets a print service charge for the copy of the ordered book, and the book copying system determines a copy charge of the ordered book based on the data service charge and the print service charge.

B1
Claim 125 (New). The book copying system of claim 124, further comprising:

at
a calculating section to calculate the copy charge based on the data service charge and the print service charge.

Claim 126 (New). The book copying system of claim 125, wherein the print service station reports a print result of the copy to the calculating section and the calculating section reduces the copy charge in accordance with the printing result of the copy.

Appln. No. 09/696,114
Amdt. dated September 16, 2003
Reply to Office Action of May 21, 2003

Claim 127 (New). The book copying system of claim 126, wherein the print service station comprises a copy result detecting section which reports the printing result.

Claim 128 (New). The book copying system of claim 126, wherein the printing result includes a notice to indicate successful printing.

Claim 129 (New). The book copying system of claim 125, wherein the calculating section conducts a payment charging process in accordance with the calculated copy charge.

Claim 130 (New). The book copying system of claim 125, wherein when the calculating section is provided in the print service station, the data service system transmits the data service charge through the network to the print service station so that the calculating section calculates the copy charge.

Claim 131 (New). The book copying system of claim 125, wherein when the calculating section is provided in the data service system, the print service station transmits the print

Appln. No. 09/696,114
Amdt. dated September 16, 2003
Reply to Office Action of May 21, 2003

service charge through the network to the data service system so that the calculating section calculates the copy charge.

Claim 132 (New). The book copying system of claim 131, wherein after the print service station prints the copy, the print service station transmits the print service charge through the network to the data service system so that the calculating section calculates the copy charge.

31
CH
Claim 133 (New). The book copying system of claim 124, wherein the data service system sets the data service charge based on at least one of a royalty of a copyright on the book, a data conversion fee to convert an original book into electronic image data and a service charge to transmit the image data.

Claim 134 (New). The book copying system of claim 133, wherein when the copyright on the ordered book is terminated, the data service system excludes the royalty of the copyright from the data service charge.

Claim 135 (New). The book copying system of claim 124, wherein the print service station sets the print service charge

B/ based on at least one of a rental fee for materials and a rental fee for a printer which is used for printing the image data.

Claim 136 (New). The book copying system of claim 135, wherein before the print service station prints the image data, the print service station estimates the copy service charge based on at least one of the rental fee for the materials and the rental fee for the printer which are expected to be used for printing the image data.

Claim 137 (New). The book copying system of claim 135, wherein after the print service station printed the image data, the print service station sets the copy service charge based on at least one of the rental fee for the materials and the rental fee for the printer which were used for printing the image data.

Claim 138 (New). The book copying system of claim 135, wherein the print service station selectively sets a printing condition in accordance with the print order and sets the print service charge in accordance with the selected printing condition.

Claim 139 (New). The book copying system of claim 135, wherein the print service station comprises a plurality of printers and sets the print service charge for each of the plurality of printers.

Claim 140 (New). The book copying system of claim 124, wherein at least one of the data service charge and the print service charge is encrypted.

Claim 141 (New). The book copying system of claim 140, wherein at least one of the data service charge and the print service charge is provided with a digital signature encrypted with a cryptography key.

Claim 142 (New). A book copying system for copying a book based on electronic image data obtained through a network, comprising:

a data service system connected to the network which
5 supplies electronic image data of a book through the network, the data service system having a data storage section in which image data of a plurality of different books are stored and a data managing section to manage the image data; and

a print service station connected to the network and installed at a place where the print service station provides print service for a customer, the print service station having a print managing section to input a print specification of a customer to print an ordered book and to communicate the data managing section so as to obtain image data of the ordered book from the data storage section through the network and a print section to print a copy of the ordered book based on the image data;

wherein at least one of the data service system and the print service station comprises a data processing section to compile the image data in accordance with the print specification of the customer, the print service station controls a printing condition to print the compiled image data by the print section in accordance with the print specification, and the book copying system determines a copy charge of the ordered book based on the print specification.

Claim 143 (New). The book copying system of claim 142, wherein the print service station sets an estimated copy charge in accordance with the print specification and indicates the estimated copy charge for the customer.

Amdt. dated September 16, 2003
Reply to Office Action of May 21, 2003

B1
Claim 144 (New). The book copying system of claim 142, wherein the data service system transmits an estimated data service charge to the print service station and the print service station sets the estimated copy charge based on the estimated data service charge.

A1
Claim 145 (New). The book copying system of claim 144, wherein the data service system transmits the estimated data service charge together with a period of validity and when the period of validity has expired, the data service system makes the estimated data service charge invalid.

B
Claim 146 (New). The book copying system of claim 144, wherein when the customer agrees to the estimated copy charge, the print service station sends an order signal to the data service system.

Sub B1
Claim 147 (New). The book copying system of claim 142, wherein the data service system transmits job ID information to the print service station.

Appln. No. 09/696,114
Amdt. dated September 16, 2003
Reply to Office Action of May 21, 2003

Claim 148 (New). The book copying system of claim 147, wherein when the customer agrees to an estimated copy charge and sends an order signal, the data service system transmits job ID information to the print service station.

Claim 149 (New). The book copying system of claim 147, wherein the data storage section specifies image data and the print service station to be sent the image data on the basis of the job ID information.

at
Bl
Claim 150 (New). The book copying system of claim 149, wherein the data storage section collates the job ID information sent from the print service station with the job ID information transmitted from the data managing section and specifies the print service station to which the image data will be sent.

Claim 151 (New). The book copying system of claim 149, wherein the data storage section forwards the job ID information sent from the print service station to the data managing section and the data managing section collates the job ID information with the job ID information forwarded from the data storage

Appln. No. 09/696,114
Amdt. dated September 16, 2003
Reply to Office Action of May 21, 2003

section and specifies the print service station to which the image data will be sent.

Claim 152 (New). The book copying system of claim 151, wherein the data managing section transmits a data storing location to the print service station in response to the order signal.

Claim 153 (New). The book copying system of claim 152, wherein the print service station accesses the data storage section on the basis of the obtained data storing location and sends the print specification to the data storage section.

Claim 154 (New). The book copying system of claim 153, wherein the data storage section includes the data processing section which compiles the image data on the basis of the print specification.

Claim 155 (New). The book copying system of claim 153, wherein the print specification includes a print mode and the data processing section compiles a page arrangement in accordance with the print mode.

Appln. No. 09/696,114
Amdt. dated September 16, 2003
Reply to Office Action of May 21, 2003

Claim 156 (New). The book copying system of claim 155,
wherein the print mode includes a page-unit print and a book-unit
print.

Claim 157 (New). The book copying system of claim 153,
wherein the data storage section encrypts the image data and the
print service station decrypts the encrypted data and conducts
the printing on the basis of the decrypted data.

Claim 158 (New). The book copying system of claim 157,
wherein the print service station conducts a trial printing
before the printing.

Claim 159 (New). The book copying system of claim 153,
wherein the print managing section of the print service station
requests the print section to conduct the printing after
obtaining the image data from the data storing location.

Claim 160 (New). The book copying system of claim 159,
wherein the print service station reports a print result of the
copy and the book copying system adjusts the copy charge in
accordance with the printing result of the copy.

Appln. No. 09/696,114
Amdt. dated September 16, 2003
Reply to Office Action of May 21, 2003

Claim 161 (New). The book copying system of claim 160, wherein the book copying system conducts a payment charging processing on the basis of the printing result.

Claim 162 (New). The book copying system of claim 160, wherein at least one of the estimated copy charge and the printing result is provided with a digital signature by a public key cryptograph method.

Claim 163 (New). The book copying system of claim 142, wherein when the print service station requests a log-in for the data service system, the data service system certifies the request of log-in of the print service station.

Claim 164 (New). The book copying system of claim 163, wherein the print service station is provided with a cryptograph key for each client and when the print service station accesses the data service system, the print service station makes a digital signature encrypted by the cryptograph key.

Claim 165 (New). The book copying system of claim 163, wherein when the printer client system accesses the service
